PROFESSIONAL SUMMARY

Full-stack Software Engineer with 2 years of IT experience building production SaaS platforms for regulated public-sector and financial-sector clients. Skilled across Python/Flask, PHP/Symfony, and Angular/React/Flutter, with hands-on ownership from database schema and API design to user-facing UI.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, C#, Java, Dart

Frontend: Angular (Signals API, RxJS, standalone components), React.js, Flutter, HTML, CSS, Bootstrap, PrimeNG, Angular Material

Backend & APIs: Flask, Symfony (PHP), Node.js, Express.js, Spring Boot, ASP.NET Core, REST APIs, JWT, SAML 2.0, Doctrine ORM

Databases: MySQL, SQLAlchemy, PostgreSQL, SQL Server, SQLite, Firestore

Messaging & Tasks: Celery, RabbitMQ, n8n

Integrations: Twilio, SendGrid, Firebase, Socket.io, pyvmomi (VMware), gevent, Jinja2

Security: TOTP/MFA, AES-256-GCM, Fernet encryption, Microsoft EntraID SSO, RBAC, Device fingerprinting

Architecture: OOP, Domain-Driven Design (DDD), 3-Tier Architecture, MVVM, Multi-tenant SaaS, Provider + Repository Pattern

Tools & DevOps: Git, GitHub, GitLab, Docker, CI/CD Pipelines, Jest

WORK EXPERIENCE

Software Engineer — AllegianceTek

October 2025 – Present

Full-stack engineer across 5 production SaaS platforms for regulated public-sector and financial-sector clients — spanning housing management, postal automation, cloud infrastructure, and shareholder services.

- Built XML/CSV export adapters for 6 French housing organizations (org-specific field mapping and transformation logic) for a multi-tenant survey platform serving 8 housing authorities, 100K+ tenants, and 152 agencies (Python, SQLAlchemy)
- Built a real-time communications dashboard covering 75K+ tracked messages, and SMS/email notification flows reaching 35K+ recipients (Angular 17, TypeScript, Twilio, SendGrid)
- Implemented Microsoft EntraID SSO via SAML 2.0 with DB-driven multi-tenant config and cross-tenant isolation, and encrypted MFA secrets at rest with AES-256-GCM using a versioned rollout scheme (PHP, Symfony, Doctrine ORM)
- Built an end-to-end document ingestion pipeline (stability checks, SHA256 verification, routing, retry archival) processing 165K+ production files, with parsers tracking 285K+ records across 4 document types (Python, Flask, SQLAlchemy)
- Built a multi-tenant cloud infrastructure SaaS from the ground up — full stack from DB/API to Angular 19 frontend, VMware VM management via pyvmomi, and layered auth (JWT blacklisting, OTP/TOTP MFA, device fingerprinting, Fernet encryption) (Python, Flask, Angular 19, PyJWT)
- Designed a shareholder self-service portal for a major asset manager — per-shareholder JWT auth, per-fund campaign gating, and a batch import pipeline (8+ validators) onboarding 128K+ shareholders across 16 funds (Python, Flask, SQLAlchemy, Angular 21)

Full Stack Developer — Apliman — Internship

March 2025 – May 2025

- Contributed to internal tools and dashboards in a modular enterprise system using Flutter and Spring Boot
- Applied MVVM architecture, Provider, and Repository patterns; worked with RESTful APIs, state management, and responsive UI across cross-functional teams

Freelance Web Developer

November 2024 – Present

- Delivered 3+ custom websites and web applications end-to-end — UI design, backend logic, database design, and admin dashboards (C# ASP.NET, SQL Server, JavaScript)

Web Developer — ISS / Software Hive — Internship

Aug 2024 – Oct 2024

- Built a React.js web application with SharePoint Online integration via REST APIs — implemented CRUD operations across SharePoint Lists, Libraries, and Pages (React.js, HTML/CSS)
- Connected application to Azure Active Directory for security token retrieval and permission-based access control (REST APIs, Azure AD)

EDUCATION

MS in Business Computer Science

2024 – 2025

Lebanese University — Faculty of Economics and Business Administration

BS in Business Computer Science

2021 – 2024

Lebanese University — Faculty of Economics and Business Administration

Achieved the highest grade for a senior project in the faculty — 18/20

CERTIFICATIONS

Software Engineering Excellence Masterclass — SE² Platform

Sep 2025

Clean Architecture, SOLID Principles, TypeScript, Node.js, scalable backend design, testing best practices, DevOps basics, and enterprise code review practices.

KEY PROJECTS

Scalable E-Commerce Backend System

TypeScript, PostgreSQL, SQLite, Jest, CI/CD

- Built a production-ready backend with 3-tier layered architecture following Domain-Driven Design (DDD) with strict separation of concerns
- Ensured reliability through comprehensive unit and integration tests; integrated CI/CD pipelines for automated builds and deployments

github.com/Software-Eng-Excellence/HusseinHaidar-cohort-3

Secured Role-Based Full-Stack E-Commerce Mobile App

Flutter, Dart, Spring Boot, PostgreSQL, JWT, Material 3

- Full-stack e-commerce system with customer and admin flows, JWT authentication, role-based access control, and atomic stock decrement on order placement
- Mobile-first Flutter frontend with Material 3, skeleton loaders, Provider state management, and unit/widget tests

github.com/Hsenhydr/Mini-Ecommerce-Challenge

Online Examination System — Freelance

Node.js, Flutter, MySQL, Express.js

- Full-stack exam platform: web interface for instructors/admins and Flutter mobile app for students with role-based access and major-scoped exam visibility

github.com/Hsenhydr/OnlineExaminationSystem

Media Agency Website — Senior Project

C#, ASP.NET Core Razor Pages, SQL Server, Bootstrap

- Full-stack company website with user subscriptions, transaction tracking, and admin panel

github.com/Hsenhydr/Senior-Project
