---

## PROFESSIONAL SUMMARY

Full-stack Software Engineer with production experience across 5 SaaS platforms for regulated French public-sector and financial-sector clients. Proficient in Python, TypeScript, PHP, and Angular, React, and Flutter, with a track record of building secure authentication systems (JWT, TOTP, SAML SSO, AES-256), data integration pipelines, real-time dashboards, and automation tooling at production scale. Comfortable owning features end-to-end — from database schema and API design to user-facing UI — with additional depth in application security, VMware infrastructure, and postal automation.

---

## TECHNICAL SKILLS

**Languages:** Python, TypeScript, JavaScript, C#, Java, Dart

**Frontend:** Angular (Signals API, RxJS, standalone components), React.js, Flutter, HTML, CSS, Bootstrap, PrimeNG, Angular Material

**Backend & APIs:** Flask, Symfony (PHP), Node.js, Express.js, Spring Boot, ASP.NET Core, REST APIs, JWT, SAML 2.0, Doctrine ORM

**Databases:** MySQL, SQLAlchemy, PostgreSQL, SQL Server, SQLite, Firestore

**Messaging & Tasks:** Celery, RabbitMQ, n8n

**Integrations:** Twilio, SendGrid, Firebase, Socket.io, pyvmomi (VMware), gevent, Jinja2

**Security:** TOTP/MFA, AES-256-GCM, Fernet encryption, Microsoft EntraID SSO, RBAC, Device fingerprinting

**Architecture:** OOP, Domain-Driven Design (DDD), 3-Tier Architecture, MVVM, Multi-tenant SaaS, Provider + Repository Pattern

**Tools & DevOps:** Git, GitHub, GitLab, Docker, CI/CD Pipelines, Jest

---

## WORK EXPERIENCE

### Software Engineer — AllegianceTek

October 2025 – Present

*Full-stack engineer across 5 production platforms for regulated French public-sector and financial-sector clients — spanning housing management, postal automation, cloud infrastructure, and shareholder services.*

#### Cortex-OPS — Multi-tenant survey platform — 8 housing authorities, 88,967 tenants, 152 agencies

- Built XML/CSV export adapters for 6 French housing organizations (OPAC36, OPHANGO, Ekidom, Nanterre, QV, Rouen) — each with org-specific field mapping and transformation logic (Python, SQLAlchemy)

- Built Relances Stats dashboard covering 76,000+ tracked communications; SMS/email notification flows reaching 35,270+ tenants (Angular 17, Twilio, SendGrid)

### **Axessy — B2B SaaS for postal management, document dematerialization, and digital signatures**

- Implemented Microsoft EntraID SSO via SAML 2.0 — DB-driven multi-tenant config, per-tenant login URLs, cross-tenant isolation, and SP metadata endpoint for enterprise onboarding (PHP, Symfony, Doctrine ORM)
- Encrypted TOTP secrets at rest with AES-256-GCM using a versioned enc:v1: prefix for backward-compatible MFA rollout without disrupting active sessions (PHP, Symfony)

### **Cortex-CIPflow — Postal document automation pipeline — 102,274 files processed in production**

- Built end-to-end ingestion pipeline: file stability detection, SHA256 verification, document-type routing, DB parsing, and retry archival across 4 document types (Python, Flask, SQLAlchemy)
- Implemented parsers tracking 288,456 mail items, 65,867 deposit proofs, and 36,181 digital receipt notifications across all production files

### **Atek Cloud Manager — Multi-tenant cloud infrastructure SaaS for VMware vSphere/vCenter/ESXi management**

- Built from the ground up — full stack from DB schema and REST API to Angular 19 frontend; multi-tenant project isolation, per-tenant quota tracking, and VMware VM management via pyvmomi (Python, Flask, Angular 19, MySQL)
- Implemented layered auth: stateless JWT + token blacklisting, email OTP + TOTP MFA with QR provisioning, 5-device fingerprinting, and Fernet-encrypted credentials (Python, Flask, PyJWT)

### **Cortex Amundi — Shareholder portal for AMUNDI — 128,779 shareholders across 16 SCPI funds**

- Designed per-shareholder JWT tokens in unique short URLs with per-fund campaign windows and SCPI gating enforced server-side (Python, Flask)
- Built batch import pipeline with 8+ validators and auto-generated PDF error reports — onboarded all 128,779 shareholders across 16 funds (Python, SQLAlchemy)

## **Full Stack Developer — Apliman — Internship**

March 2025 – May 2025

- Contributed to internal tools and dashboards in a modular enterprise system using Flutter and Spring Boot
- Applied MVVM architecture, Provider, and Repository patterns; worked with RESTful APIs, state management, and responsive UI across cross-functional teams

## **Freelance Web Developer**

November 2024 – Present

- Delivered 3+ custom websites and web applications end-to-end — UI design, backend logic, database design, and admin dashboards (C# ASP.NET, SQL Server, JavaScript)

## Web Developer — ISS / Software Hive — Internship

Aug 2024 – Oct 2024

- Built a React.js web application with SharePoint Online integration via REST APIs — implemented CRUD operations across SharePoint Lists, Libraries, and Pages (React.js, HTML/CSS)
- Connected application to Azure Active Directory for security token retrieval and permission-based access control (REST APIs, Azure AD)

## EDUCATION

---

### MS in Business Computer Science

2024 – 2025

Lebanese University — Faculty of Economics and Business Administration

### BS in Business Computer Science

2021 – 2024

Lebanese University — Faculty of Economics and Business Administration

*Achieved the highest grade for a senior project in the faculty — 18/20*

## CERTIFICATIONS

---

### Software Engineering Excellence Masterclass — SE<sup>2</sup> Platform

Sep 2025

Clean Architecture, SOLID Principles, TypeScript, Node.js, scalable backend design, testing best practices, DevOps basics, and enterprise code review practices.

## KEY PROJECTS

---

### Scalable E-Commerce Backend System

TypeScript , PostgreSQL , SQLite , Jest , CI/CD

- Built a production-ready backend with 3-tier layered architecture following Domain-Driven Design (DDD) with strict separation of concerns
- Ensured reliability through comprehensive unit and integration tests; integrated CI/CD pipelines for automated builds and deployments

[github.com/Software-Eng-Excellence/HusseinHaidar-cohort-3](https://github.com/Software-Eng-Excellence/HusseinHaidar-cohort-3)

### Secured Role-Based Full-Stack E-Commerce Mobile App

Flutter , Dart , Spring Boot , PostgreSQL , JWT , Material 3

- Full-stack e-commerce system with customer and admin flows, JWT authentication, role-based access control, and atomic stock decrement on order placement
- Mobile-first Flutter frontend with Material 3, skeleton loaders, Provider state management, and unit/widget tests

[github.com/Hsenhydr/Mini-Ecommerce-Challenge](https://github.com/Hsenhydr/Mini-Ecommerce-Challenge)

### Online Examination System — Freelance

Node.js , Flutter , MySQL , Express.js

- Full-stack exam platform: web interface for instructors/admins and Flutter mobile app for students with role-based access and major-scoped exam visibility

[github.com/Hsenhydr/OnlineExaminationSystem](https://github.com/Hsenhydr/OnlineExaminationSystem)

## **Media Agency Website — Senior Project (18/20)**

*C# , ASP.NET Core Razor Pages , SQL Server , Bootstrap*

- Full-stack company website with user subscriptions, transaction tracking, and admin panel — achieved the highest senior project grade in the faculty

[github.com/Hsenhydr/Senior-Project](https://github.com/Hsenhydr/Senior-Project)
